常见问答

问题	为什么产品在使用时会感到热?
解答	电子产品在使用时会产生热量,本产品机身身为铝合金外壳,能将热量迅速导出表面。产品在满载的工作情况下金属外壳的温度为55度左右(实验环境温度温度为25度)。 根据GB4943.1-2011标准规定短时间握持的设备金属材质不得超过60度,温度在标准合格范围内,请您放心使用;

问题	为什么我的移动硬盘用不了?
解答	机械硬盘、固态硬盘等属于大功率设备,全负载状态的功率为2~10W,需要外接PD供电,才能确保设备相关功能正常使用。 常规的U盘、鼠标、键盘等属于小功率设备,可直接插入使用。

Product Q & A

Question	Why doesn't my mobile hard drive work anymore?
Answer	Mechanical hard disk, solid state hard disk, etc. are high-power devices. The power of full load state is 2~10W. External PD power supply is needed to ensure the normal use of device-related functions. Conventional U-disks, mice, keyboards, etc. are small power devices that can be plugged in directly.

Question	Why does the product feel hot when used?
Answer	When electronic products are used, heat will be generated. The body of this product is aluminum alloy shell, which can quickly export the heat to the surface. When the product is fully loaded, the temperature of the metal shell is about 55 degrees (the temperature of the experimental environment is 25 degrees). According to gb4943.1-2011 standard, the metal material of the equipment held in a short time shall not exceed 60 degrees. The temperature is within the standard range, so please feel free to use it;

Wireless Charging

Please confirm whether your phone supports wireless charging. It is normal for the USB C hub to get a little warm during charging. Examples of partially compatible phones:
